

## USER GUIDE PODEMETER ALARM, PODEMETER PULSE AND PODEMETER RADIO

### Introduction

#### General about Pedometers

To register every step the pedometer uses a built-in patented pendulum. This pendulum is moving and will during movement give a clicking sound. This is completely normal and is required to make the product work properly.

### Filter function

The Pedometer has a function which prevents accidental registration of steps when standing still or at short accidental movements that is not part of the walk/jog. For correct step counting 6 steps in a row must be taken without a stop.

### Attaching the pedometer

The ideal place is to attach it on the top of the trousers or on a belt close to the hip. For best functionality it shall be placed vertically i.e. not tilting. (1)

### Misc

Remove the battery isolation strip before using the pedometer the first time. (For Pedometer Alarm: Make sure that the alarm lanyard pin is attached to the pedometer before removing the battery isolation strip).

The Pedometer is not shock-, or waterproof - therefore treat it carefully.

### Setting distance and weight units

The Pedometer's default setting is metric (Km for distance, cm for stride length and kg for body weight). This can be changed to Imperial (miles, ft and lb).

Press and hold ADJUST for 5 seconds. The pedometer will first reset and then display MIL instead of KM. Repeat this procedure to change back.

### Battery replacement

This pedometer is powered by a Lithium CR2032 battery. Change battery when the battery icon in the display is visible. The battery is placed under the belt clip and is reached by unscrewing the screw and removing the belt clip. (2) If the battery is changed within 20 seconds the pedometer will keep the previously stored data in the memory.

## PODEMETER ALARM Art.No. 56015

### Buttons

This pedometer has 4 buttons Mode, Back light (3), Adjust and Set (4).

### Main operating modes

This pedometer registers steps and measures distance and calories.

Press MODE to toggle between the modes.

### Personal settings

Personal setting of stride length and weight are needed to get accurate values of distance and consumed calories.

### Setting Stride length (30-240cm)

Set the stride length by walking 10 steps and then measure that distance. Divide the distance by 10 to find the stride length.

Press MODE so the text KM appears in the display.

Press SET and the current stride length is displayed.

Press ADJUST repeatedly to increase the stride length to the wished value (increases by 1 cm per press, or 0.1 ft if MIL is selected). After a few seconds the pedometer will return to the distance mode and the new stride length is set.

### Setting Body weight (30-125 kg)

Press MODE until CAL is shown in the display.

Press SET and the current body weight is displayed.

Press ADJUST repeatedly to increase the body weight to the wished value (increases by 5 kg per press, or 10 lb if MIL is selected). After a few seconds the pedometer will return to the calorie mode and the new body weight is set.

### Total memory

The Pedometer has a total memory function that stores total Steps, Distance, and Calories.

Press and hold MODE for 2 seconds to enter the Total Memory mode while in any of the main operating modes.

Press MODE continuously to toggle between the different Total modes (Steps, Distance and Calories). Press and hold MODE for 2 seconds to leave Total Mode.

### Panic alarm

Pull the alarm lanyard to activate the panic alarm. (6)

### Resetting the pedometer

Press and hold ADJUST button for 2 seconds to reset the pedometer.

NB! This will reset the current data but not the Total Memory.

### Resetting the Total Memory

Press and hold MODE for 2 seconds to enter Total Memory.

Press and hold ADJUST button for 2 seconds and all Total Memory data is deleted.

## PODEMETER PULSE Art.No. 56016

### Buttons

This pedometer has 4 buttons. Mode, Back light (3), Adjust and Set (4).

### Main operating modes

This pedometer registers steps and measures distance, time, speed and heart rate.

Press MODE to toggle between the modes.

The Timer is an automatic function that starts when the pedometer is in action

### Personal settings

The stride length and is needed to get accurate value of distance

### Setting Stride length (30-240cm)

Set the stride length by walking 10 steps and then measure that distance. Divide the distance by 10 to find the stride length.

Press MODE so the text KM appears in the display.

Press SET and the current stride length is displayed.

Press ADJUST repeatedly to increase the stride length to the wished value (increases by 1 cm per press, or 0.1 ft if MIL is selected). After a few seconds the pedometer will return to the distance mode and the new stride length is set.

### Heart rate monitor

Press MODE until the heart symbol is visible in the display to measure heart rate.

Press SET to activate the heart rate sensor and place a finger gently on the sensor (7). Wait a few seconds and the pulse will be shown in the display. If the heart rate monitoring does not work, press SET again and adjust the fingers position and the pressure. Also try different fingers

### Total memory

The Pedometer has a total memory function that stores total Steps, Distance, and Time.

Press and hold MODE for 2 seconds to enter the Total Memory mode while in any of the main operating modes.

Press MODE continuously to toggle between the different Total modes (Steps, Distance and Time). Press and hold MODE for 2 seconds to leave Total Mode.

### Resetting the pedometer

Press and hold ADJUST button for 2 seconds to reset the pedometer.

NB! This will reset the current data but not the Total Memory.

### Resetting the Total Memory

Press and hold MODE for 2 seconds to enter Total Memory.

Press and hold ADJUST button for 2 seconds and all Total Memory data is deleted.

## PODEMETER RADIO Art.No. 56017

### Buttons

This pedometer has 6 buttons. Mode, Adjust,(3) Set, Back light(4) and two volume/frequency buttons (5)

### Main operating modes

This pedometer registers steps and measures distance, calories and time.

Press MODE to toggle between the modes.

The Timer is an automatic function that starts when the pedometer is in action

### Personal settings

Personal setting of stride length and weight are needed to get accurate values of distance and consumed calories.

### Setting Stride length (30-240cm)

Set the stride length by walking 10 steps and then measure that distance. Divide the distance by 10 to find the stride length.

Press MODE so the text KM appears in the display.

Press SET and the current stride length is displayed.

Press ADJUST repeatedly to increase the stride length to the wished value (increases by 1 cm per press, or 0.1 ft if MIL is selected). After a few seconds the pedometer will return to the distance mode and the new stride length is set.

### Setting Body weight (30-125 kg)

Press MODE until CAL is shown in the display.

Press SET and the current body weight is displayed.

Press ADJUST repeatedly to increase the body weight to the wished value (increases by 5 kg per press, or 10 lb if MIL is selected). After a few seconds the pedometer will return to the calorie mode and the new body weight is set.

### Radio

#### Radio ON/OFF

Press MODE repeatedly until OFF is visible in the display.

Press and hold MODE for 2 seconds. The radio is now turned on and a frequency is displayed.

Repeat to turn the radio off.

**Adjusting frequency and store channels**

Press ADJUST button and the frequency starts to flash.

Press UP/DOWN arrows to select frequency. (Single press to manually adjust frequency OR press and hold 1 second for automatic selection)

Press SET and a channel starts flashing in the display.

Press UP/DOWN to select in which channel the frequency shall be stored. (Channel 1-9)

Press SET to finally store the frequency to the selected channel.

**Toggle between stored channels**

Press SET to toggle between stored channels. (Channel 1-9)

### Volume

Press UP or DOWN arrows to adjust volume.

The radio is equipped with a battery save function that automatically turns the radio off if the pedometer has not been moved for 10 minutes. The radio must then be manually turned on to be used.

### Resetting the pedometer

Press and hold ADJUST button for 2 seconds to reset the pedometer.

NB! This will reset the current data but not the Total Memory.

### Resetting the Total Memory

Press and hold MODE for 2 seconds to enter Total Memory.

Press and hold ADJUST button for 2 seconds and all Total Memory data is deleted.

## SE

## ANVÄNDARMANUAL FÖR PODEMETER ALARM, PODEMETER PULSE OCH PODEMETER RADIO

### Introduktion

#### Allmänt om pedometrar

För att registrera varje steg använder pedomatern en inbyggd pendel. Pendeln är rörlig och kommer vid rörelse att avge ett klickande ljud. Detta är normalt och är en förutsättning för att pedomatern ska fungera.

### Funktion

Pedomatern är försedd med en funktion som förhindrar oavsiktlig stegregistering vid stilstående eller vid korta tillfälliga rörelser som inte är del av promenaden/löpturen. För att stegräkning skall ske måste 6 steg i rad tas utan uppehåll.

### Placering av pedometern

Idealiska placeringar är i byxlinnen eller livluren vid höften. För bästa funktion skall pedomatern fästas helt upprätt d.v.s. inuti luta. (1)

### Ovrigt

Avläggda batteriskydd vid då pedomatern används för första gången. (För Pedometer Alarm: Se till att alarmbandet och pinnen är monterad innan batteriskyddet tas bort)

Pedomatern är inte vattentät eller stötdämd - behandla den därför varsamt.

### Byta av distans- och viktbenöt

Pedometerns grundinställning är metriska enheter (Km för distans, cm för steglängd och kg för kroppsvikt). Detta kan ändras till miles och ft. Respektive ibo.

Tryck och håll inna ADJUST i mer än 5 sekunder. Pedometern kommer först att nollställas och sedan kommer displayen visa MIL i stället för KM och vid kroppsviktsinställning i bilden förft.

Pedometern är inte vattentät eller stötdämd - behandla den därför varsamt.

### Batteribyte

Denna pedometern drivs av ett litium CR2032 batteri. Batteriet bör bytas då batteriet i displayen blir synlig. Batteriet är placerat under bälteskläppen. Skruva bort skruven och ta bort bälteskläppet. (2) Om batteriet byts inom 20 sekunder kommer data sparad i pedometern att behållas.

## PODEMETER ALARM Art.No. 56015

### Buttons

Denna pedometern har fyra knappar: Mode, Skärbelysning (3), Adjust och Set (4).

### Huvudfunktioner

Denna pedometern registrerar Steg och mäter Distans, Kalorier och Tid.

Tryck på MODE för att välja bland huvudfunktionerna.

### Personliga inställningar

Steglängd och vikt behövs för att ge noggranna värden på Distans och Kalorier.

### Bestätta och sätt in i steglängd (30-240cm)

Att ta reda på steglängden gör enklast genom att exempelvis gå 10 steg och sedan mäta den tillryggalagda distansen.

Dividera distansen med 10 och aktuellt steglängd erhålls.

Tryck MODE till texten KM visas i displayen.

Tryck SET och den nuvarande steglängden visas i displayen.

Tryck uppreda gängar på ADJUST för att öka steglängden till önskat värde (öknings sker med 1 cm per tryck, eller 0.1 ft om MIL är inställt). Efter några sekunder återgår stegräkningen till distansfunktionen och den nya steglängden är inställt.

### Ställa in kroppsvikt (30-125 kg)

Tryck MODE uppreda gängar tills texten CAL syns i displayen.

Tryck nu på SET varvid den inställda kroppsvikten visas i displayen. Tryck uppreda gängar på ADJUST för att ändra kroppsvikten till önskat värde (
